

Transparency Commitments Statement

This statement explains how evidence in this project is collected, checked, corrected, and kept open for public review. The goal is simple: anyone should be able to understand where the numbers came from, how charts were built, and what happens if a mistake is found. Every step is designed so that students, parents, workers, officials, and judges can read the material without special training. Transparency is the foundation of trust.

1. What Counts as Evidence

Only public, official, checkable data is used. This includes sources such as FRED, the Census Bureau, BLS, HUD, FHFA, CBO, GAO, and Congress.gov. No private databases, no leaked material, and no scraped social media are used. Every number comes from a public agency that posts its methods and update schedule.

2. How Evidence Is Collected

All data is downloaded directly from the official agency websites. Economic series come from FRED. Inflation and labor data come from BLS. Income and housing surveys come from the Census. Federal budget and audit material come from CBO and GAO. Housing and mortgage data come from HUD and FHFA. Hearing transcripts, quotes, and votes come from Congress.gov and GovInfo. Nothing is hidden.

3. How Errors Are Corrected

If an error is found, it is corrected as soon as possible. A correction log records what was changed, when, and why. Charts are updated with the correct data. Older versions are archived so that nothing disappears quietly. Corrections are public. There are no silent edits.

4. How the Community Can Challenge This Work

Anyone can question or challenge a number, quote, or chart. To do this, readers can send the source link or the series code they checked. If the challenge is valid, the material is corrected and logged. If the data is already accurate, the explanation is provided. The goal is open dialogue and shared truth.

5. How Updates Are Made

When agencies release new data, charts are updated. Each update cycle includes the date of the update and a list of the affected charts. If an agency revises older data, the charts are revised to match the official record.

6. How This Project Avoids Misuse

This project does not use private models, predictions, or algorithms that cannot be inspected. All charts reflect raw public data or simple calculations described in the Methodology Notes. The project does not exaggerate trends, hide context, or remove important limitations. Every chart is meant to show what the data actually says.

7. How Limitations Are Communicated

Every dataset has limits. Some data is delayed. Some is revised later. Some reflects national averages that hide local differences. These limits are explained in the Methodology Notes. The charts should be read with these limits in mind.

8. Final Commitment

This project will always show its work, cite its sources, accept corrections, and welcome challenges. Transparency is not an optional feature. It is the core rule. Anyone should be able to rebuild the charts from the source links provided. The public record belongs to the public.
